

## RISERid

**Registry Information from European public registers available in even more countries**

**The Registry Information Service on European Residents (RISER Service) is an eGovernment Service facilitating the retrieval of information from official population registers for the purpose of cross-border address verification via Internet. The service is supplied by national or local authorities with data from population registers all over Europe. The Initial Deployment project RISERid aims at initially rolling out the RISER Service in Europe based on the results of the Market Validation Projects RISER and RISERac.**

Information from public registers is one of the most important sources of information for economics and administration in Europe when it concerns the actualisation of addresses. Approximately 1.3 billion inquiries are addressed to European public registers annually. RISER offers the opportunity to request address information online - through its web portal - from public registers from Germany, Austria, Hungary, Ireland and Estonia. With this, the service already covers ¼ of Europe's population. The market deployment of the service has started after a successful pilot phase and focuses on connecting even more European public registers to the RISER network.

RISERid is an "Initial deployment project" supported by eTEN to roll-out the service to further European countries. The RISERid Consortium is coordinated by the PSI Information Management GmbH and includes companies, research facilities, and public authorities. The partners are AS Andmevara, Estonia, IDOM 2000, Hungary, ARAM, Poland, KDZ Centre for Public Administration Research, Austria, Fraunhofer FOKUS, Germany, Independent Centre for Privacy Protection Schleswig-Holstein, Germany, Landesamt für Bürger- und Ordnungsangelegenheiten Berlin, Germany, Wirtschafts-Informations-Dienst GmbH and Waterford Institute of Technology, Ireland.
